

Bharathkumar Palanisamy

Frontend Engineer · AI-Integrated Products — React · TypeScript · AI Agents · Developer Tools

kumarbharath63@gmail.com · github.com/Bharath-code · linkedin.com/in/bharathkumar-palanisamy · India · Remote-friendly

SUMMARY

Frontend engineer with 10+ years of experience and deep AI engineering practice — RAG, tool calling, guardrails. Shipped 30+ products end-to-end as an independent product engineer, including an open-source CLI with 98+ GitHub stars, published npm libraries, and production SaaS with auth, billing, and background jobs. Looking to bring end-to-end shipping velocity to a product team.

EXPERIENCE

Independent — *Product Engineer, Developer Tools & AI* 2021 — Present

- Designed, built, and shipped 30+ products solo — from open-source CLIs to production AI SaaS — owning UI craft, backend, deployment, and distribution.
- Built **git-scope** (Go/Bubble Tea terminal UI, 98+ GitHub stars, 15 releases, Homebrew distribution) for multi-repo Git status at a glance.
- Shipped **RivalEye**, a competitive-intelligence SaaS (Next.js 16, React 19, Supabase RLS, Trigger.dev, Gemini Vision) with billing, quotas, and a 3-scraper fallback crawling pipeline.
- Published npm libraries: **ai-cost-guard** (LLM budget guardrails and PII detection), **loopkit**, **debugg**.
- Daily AI-assisted engineering practice: agents, RAG pipelines, prompt design, cost and safety guardrails.

Accenture — *Full-Stack Engineer* 2019 — 2021

- Built an enterprise Code Scan Platform from scratch that identified vulnerabilities in large-scale applications.
- Reduced deployment time by 60% with CI/CD pipelines; delivered pixel-perfect React dashboards from Figma designs.

Infosys — *Full-Stack Engineer* 2015 — 2019

- Delivered secure banking features for national banks in Agile sprints.
- Improved backend performance by 40% with Redis caching and PostgreSQL query optimization.

SELECTED PROJECTS

git-scope — github.com/Bharath-code/git-scope

Terminal UI for the status of every Git repo on a machine. Go, Bubble Tea, 98+ stars, Homebrew.

RivalEye — rivaleye.vercel.app

Competitive intelligence SaaS: geo-aware price monitoring from 4 regions, Gemini Vision branding analysis, AI tactical briefs.

ai-cost-guard — npm

Open-source TypeScript guardrails for AI apps: pre-call budget enforcement, tenant quotas, secret/PII detection.

Recall — github.com/Bharath-code/recall

Local-first command memory for developers: repo-aware capture in SQLite, opt-in AI semantic search, zero telemetry. Homebrew beta.

SKILLS

Frontend	React 19, Next.js (App Router), TypeScript, Astro, Svelte 5, Tailwind CSS, GSAP, Radix UI
AI Engineering	LLM integration, RAG & vector search, tool calling & agents, prompt engineering, guardrails & cost control (Gemini, OpenAI, Claude)
Backend & Data	Node.js, Go, Supabase (Postgres + RLS), Convex, SQLite, REST APIs, Trigger.dev
Shipping & Quality	Vite, Bun, Playwright, GitHub Actions, Vercel, Cloudflare, PostHog, Core Web Vitals
